Imperial Institute.

South Kensington, London, S.W.,

Advisory Committee on Silk, Production.

Memorandum on Indian Silk Production.

The Advisory Committee on Silk production of the Imperial Institute has recently discussed the possibility of the Indian Silk Industry taking a more important part in meeting the requirements of the United Kingdom in silk raw materials.

The supply of certain qualities of raw silk and silk waste has been interrupted by the War, with a consequent high rise in price which it is considered is likely to be maintained for some time. The present therefore affords a most favourable opportunity for an increased production in India of silk raw materials of a quality suited to the market requirements of the United Kingdom; and for establishing such conditions as may contribute to render this country less dependent on Foreign supplies ~~xxxx~~ of these materials, after the war. The Committee is satisfied that the whole of any probable outturn of approved Indian Silk would be absorbed by this and other countries at a price most favouable to the Indian producer.

The committee desires to submit the following suggestions for the favourable consideration of the Government of India.

1. The production of the high quality silk produced in Kashmir and Patiala should be increased; and if possible silk of this standard introduced into Bengal, Madras and Mysore. In the latter areas, the extensive cultivation of the Madagascar worm. or a similar multivoltine race, would afford the quickest means of attaining the results desired. Such action need not interfere with the present industry in Bengal and Mysore silks, and would result in increased profits to the Indian producer. ~~Fxxxx~~ Further the increased returns obtained may induce many rearers who have abandoned silk production on account of low prices to return to the industry.

The Committee therefore recommends that immediate consideration should be given by the Government of India to this question,

obtainable in bulk instead of small irregular parcels.
The Committee suggests that in view of the possibility of increasing the outturn of Eri Silk in Assam, and the assured market for the product, steps shouls be taken to make the present prices widely known in the producing areas of Assam.

Summary.

The Committee is of opinion that the present situation in the silk trade offers prospects of an increased demand in this country for Indian Silk raw materials and considers that advantage should be taken of the situation before foreign countries do so. The Committee therefore urges that action in regard to the following measure should be taken in India in time to be effective during the approaching cold weather.

(a) Increased production in Kashmir and Patiala of the high quality silk now grown in those countries.

(b) Extensive cultivation of a multivoltine worm (preferably the Madagascar race) in Bengal, Mysore and Madras.

All produce of this race to be reeled separately from that of other varieties, and marketed in this country.

(c) Reeling of all raw silk exported to be of the highest standard.

(d) Improvement in the preparation of Indian waste silk.

(e) Increased production of Eri Silk in Assam.

Further recommendations of the Committee are postponed until the Committee has been able to study Professor Lefroy's report on the Indian Silk Industry, and has received information as to the action likely to be taken thereon by the Government of India.

Sd/- Frank Warner,

Chairman.

Advisory Committee on Silk Production.

Sir,

On behalf of the Advisory Committee on Silk Production of the Imperial Institute, I beg to submit, for the consideration of the Secretary of State, the attached Memorandum regarding Indian Silk which has been prepared by the Committee.

The Committee attaches great importance to the subject in question, and desires to express the hope that its suggestions will receive favourable consideration.

The following are the members of the Committee on Silk Production:-

Frank Warner Esq., (Messrs Warner and Sons), Chairman, Nominated by the Silk Association of Great Britain and Ireland incorporated.

Sir Henry Birchenough, K. C. M. G.,
Professor W. R. Dunston, C.M.G. F. R. S.,
Francis F. Durant, Esq., (Messrs Durant, Bevan and Co.,).
Wm. Frost, Esq., (Messrs Wm. Frost and Sons).
J. Sugden Smith, Esq., (Messrs John Hind and Co., Ltd.)
Richard Snow, Esq., (Messrs Windley and Co.)
A. J. Solly, Esq., (Messrs Reade and Co., Ltd.,).
Wm. Watson, Esq., (Messrs Lister and Co., Ltd.,).
Professor Maxwell Lefroy, Imperial College of Science and Technology
Wm. Stokes, Esq., (Messrs Lewis Balfour and Co.,).
Dr. S. E. Chandler, Acting Secretary.

I am, etc.,

Sd/- Frank Warner,

Chairman of the Committee.

GOVERNMENT OF HIS HIGHNESS THE MAHARAJA OF MYSORE,

GENERAL AND REVENUE SECRETARIAT.

No. Pol. 531
A+E 107-17-3

Bangalore, Dated 24 December 1917

From

P. G. D'Souza Esq., B.A., B.L.,

Secretary to the Government of His Highness the Maharaja of Mysore,

Departments of Education and Agriculture.

To

Major E. H. S. James,

First Assistant to the Hon'ble the Resident in Mysore.

SIR,

I am directed to acknowledge with thanks your letter No.8867 dated the 21st November 1917 forwarding for the information of the Government of His Highness the Maharaja and for necessary action copy of a letter from the Chairman, Advisory Committee on Silk Production to the Under Secretary of State for India regarding the measures to be adopted for increasing production of silk raw - - materials in India and improving their quality.

2. The Advisory Committee has suggested that the Madagascar worm or a similar multivoltine race should be introduced and largely - - cultivated in Mysore both because the silk thereby produced is largely in demand at home and that its cultivation will afford the greatest means of attaining the results desired. But local experiments conducted with the Madagascar worm by Signor Washington Mari have not proved successful and neither the yield nor the quality of the silk has been superior to that of the Mysore worm which Mr. Lefroy considered to be the best species of silk worm in India. But should the demand for silk cocoons from the Madagascar species

so that if possible some action may be taken during the coming cold season.

2. If action is taken to increase the cultivation of the Madagascar race in Bengal, Madras and Mysore during the coming winter, the whole crop of cocoons produced should be carefully and separately reeled and the raw silk marketed in this country. The Committee suggests that this should be done through the Bengal Silk Committee and the Madras Agricultural Department respectively. Similar action should be suggested to the Government of Mysore.

3. The Committee wishes to point out that the present high cost and scarcity of labour in England has stimulated the use of the higher qualities of silk, since these qualities work better and save labour.

It is therefore most desirable that all raw silks exported from India should be reeled to the highest standard possible. Silk of inferior quality should be re-reeled before export.

4. Waste Silk. (Chassum). There is a large field in this country for waste silk of good quality. Present prices for this silk are now very high, and likely to be maintained for some years. The Committee considers that the market for Indian Waste Silk in this country could be greatly extended if the material were properly cleaned. Hitherto, the great obstacle, to the use of Indian Waste Silk has been its contamination with wool, cotton and other vegatable fibres, and with clay derived from the impure water used in washing and reeling. This shouls be remedied.

5. Eri Silk. In consequence of the present high prices of cotton linen, wool and other textile fibres, the use of spun silk is increasing. Certain grades of cotton are valued at a higher price than Eri cocoons, and while these cocoons cannot replace cotton the higher price of the latter leads to enhanced values and increased use of the former. The Committee is agreed that there would be a much larger use of Eri cocoons in this country if supplies for export were increased and maintained; and if the product were

obtainable

be sufficient, the Durbar will be glad to endeavour to popularize the species in new areas and meet the demand.

3. The Government of His Highness the Maharaja however are now endeavouring their best to increase the output of silk in the State. At present there is more than ample local demand for the entire quantity of silk produced in the State but as the Government have undertaken extensive developments they may be able to produce silk for outside markets also by proper arrangements.

4. If the Advisory Committee will therefore be so good as to send samples of silk for which there is a large demand at present time and intimate the probable quantity that may be required, the Government of His Highness the Maharaja would be glad to take all necessary measures to meet the requirements of merchants in England and to make special arrangements to have the silk re-reeled if necessary before being sent out. I am to state also that, if required, samples of silk at present produced in Mysore and re-reeled will be forwarded.

I have the honor to be,

Sir,

Your most obedient servant,

Secretary to Government,

Departments of Education and Agriculture.

FROM

MAJOR E. H. S. JAMES,
FIRST ASSISTANT TO THE RESIDENT IN MYSORE.

To

The Secretary to the Government of Mysore,
Departments of Education and Agriculture.

Dated Bangalore, 23rd March 1918

SIR,

I am directed to refer to your letter No.Pol 531, dated the 8th December 1917, regarding measures to be adopted for increasing the output of silk in the Mysore State.

2. The Government of India say that the India Office have been informed that the Advisory Committee of the Imperial Institute on Silk Production recommend that the Madagascar worm or a similar multivoltine race should be extensively cultivated in Madras and Mysore, and that this recommendation, presumably has the support of Mr. Maxwell Leproy who is a member of the Committee, Mr. Leproy, however, in Chapter III of his report on the silk industry in India, laid considerable stress on the desirability of concentrating efforts in Mysore and Madras on improving the Mysore race of silk worms and stated

stated that no attempt should be made to replace it by any other race until the most exhaustive examination had been made. The India Office have also been informed by the Government of India that local experiments conducted in the Mysore State with the Madagascar worm have not proved successful and that neither in yield nor in quantity has the silk been found superior to that of the Mysore worm, and they have been asked that, if there is no objection, the Advisory Committee of the Imperial Institute may be requested to give further consideration to the question of the advisability of introducing the Madagascar race of silk worm into Madras and Mysore in the light of remarks made by Mr. Leproy in chapter III of his report.

3. I am accordingly to inform you that the Durbar's offer to introduce the Madagascar species has not been communicated to the India Office, pending further consideration of the advisability of such action.

I have the honour to be,

Sir,

Your most obedient servant,

First Assistant Resident.

------:0:------

With reference to your letter 214-C dated 7th February 1918 I forward, for information, a copy of the papers noted in the margin on the subject of the memorandum on silk production.

To Chairman, Advisory Committee on Silk Production dated 9th April 1918.

From---do---do--- dated 21st May 1918.

R. &. S. 1048.

India Office,
London, S. W. 1.
9th April 1918.

Sir,

With reference to your letter dated 17th August 1917 with which you forwarded a Memorandum regarding Indian Silk which had been prepared by the Committee, I am directed by the Secretary of State for India to transmit herewith copy of a letter No. 214-C dated 7th February 1918 received from the Government of India, and he will be glad to receive any observations the Committee may desire to offer.

I am, etc.,
Sd. L.J.Kersha.

The Chairman,
Advisory Committee on Silk Production,
Imperial Institute.

P.T.O.

23

Imperial Institute,
London, S.W.7.
21st May 1918.

Advisory Committee on Silk Production.

Sir,

With further reference to your letter No. R.&.S. 1048 dated 9th April 1918, I have to state that the questions raised by the Government of India in regard to the Memorandum on Indian Silk Production have now been carefully considered by this Committee.

2. The Committee desire to state that at the time of the despatch of the Memorandum to the India Office they had not received a copy of Professor Lefroy's report, and therefore were unaware of Professor Lefroy's views on this matter as recorded in his report, The Memorandum, however, was prepared at the suggestion, and with the technical advice of Professor Lefroy a member of the Committee.

3. The Committee have now read the report, and the criticisms of the Government of India appear to be justified. Professor Lefroy is at present abroad on Government business. It is possible that between the time of writing his report, and his recommendations to the Committee Professor Lefroy may have modified his opinion regarding the Madagascar worm, but on this point the Committee have at present no information. They propose to refer the question to Professor Lefroy for his observations, and on receipt of his reply a further communication will be addressed to you.

I am, etc.,
Sd. Frank Warner,
Chairman,
Advisory Committee on Silk Production.

The Under Secretaty of State for India,

No. 214-C.

From

The Secretary to the Government of India in the
Department of Revenue and Agriculture,

To,

The Secretary,
Revenue and Statistics Department,
India Office, L O N D O N.

Dated Delhi, the 7th February 1918.

Sir,

I am directed to refer to the India Office letter No. 2563 R.&.S., dated the 29th August 1917 with which was forwarded a memorandum on Indian Silk Production drawn up by the Advisory Committee of the Imperial Institute on Silk Production. The Committee recommend that the Madagascar worm or a similar multivoltine race, should be extensively cultiva-ted in Madras and Mysore and this recommendation, presumably, has the support of Mr. Maxwell Lefroy, who is a member of the Committee. Mr. Lefroy, however, in chapter III of his report on the silk industry in India, laid considerable stress on the desirability of concentrating efforts in Mysore and Madras on improving the Mysore race of silk worms, and stated that no attempt should be made to replace it by any other race until the most exhaustive examination had been made. Moreover, the suggestion of the Committee appears to be impracticable in the Madras Presidency as the Silk industry at Kollegal depends on the cultivation of bush mulberry as a field crop, while the Madagascar worms need tree mulberry. It would be difficult to persuade the ryots to plant the latter on the chance that the leaves might be in demand for a foreign race of silk worms many years later. In the circumstances, the Government of Madras hesitate to act on the advice of the Committee.

P.T.O.

25

2. The Mysore Durbar also reports that local experiments conducted with the Madagascar worm have not proved successful and that neither in yeild nor in quality has the silk been found superior to that of the Mysore worm.

3. I am accordingly to request that, if there is no objection, the Advisory Committee of the Imperial Institute may be asked to give further consideration to the question of the advisability of introducing the Madagascar race of silk worm into Madras and Mysore in the light of the remarks made by Mr. Lefroy in Chapter III of his report.
